EDUCATION

B.Tech, Computer Software Engineering

Khujand Polytechnic Institute of TJTU
2021 – 2025

Frontend engineer with 3+ years shipping production SaaS, enterprise, and consumer software — from a 1,000+ user CRM and a national streaming platform, to an online-education product used across Central Asia. Comfortable owning frontend architecture end-to-end (component systems, state management, performance) and increasingly full-stack: backend APIs, CI/CD pipelines, and Linux infrastructure. Founder of Artemis io, building an independent product suite spanning HR tech and online education.

AttoLabs Frontend Developer

Khujand, TJ · Sep 2025 - Present

- Frontend engineer on UzbekFilm, a national streaming platform, and Exode, an online-school platform serving roughly 10,000 learners across Central Asia.
- On Exode: maintain and extend a production React SSR + GraphQL codebase, using Observable and Redux State Sync to keep server and client state in sync; resolve bugs surfaced by real user feedback.
- On UzbekFilm: resolved complex, cross-module bugs and improved application stability; own frontend integration with backend Java services via REST APIs.
- Maintain a reusable, documented UI component architecture for long-term scalability across projects.

Freelance DevOps Engineer

Remote · Jan 2026 - Present · parallel with AttoLabs

- Designed and maintained CI/CD pipelines (Jenkins, GitLab CI/CD, GitHub Actions) to automate build, test, and deployment for client web applications.
- Provisioned servers as code with Terraform and Ansible, standardizing repeatable environments across staging and production.
- Administered Linux servers end-to-end — hardening, users & permissions, systemd services, Nginx reverse proxies, and SSL certificates.
- Containerized applications with Docker and Docker Compose for consistent local, staging, and production environments.
- Set up monitoring and alerting dashboards with Grafana and Prometheus to track uptime, resource usage, and errors.
- Used Claude Code over SSH to script and automate day-to-day server operations and deployment checks.

FinGroup Frontend Developer

Remote, Tajikistan · Jan 2024 - Aug 2025

- Core frontend engineer on shamCRM — an enterprise CRM comparable to Bitrix24 / amoCRM — within a 10-person engineering team.
- Helped grow the platform to 1,000+ active users; owned a full UI redesign and the B2B / B2C product surfaces.
- Built leads, deal-pipeline, task, chat, and dashboard modules, plus role-based access control.

Earlier: Karimov Group & ITalent (Freelance), 2023 — REST API integration and early frontend work on Iki Food · Ioyandasoz, 2022–2023 — Frontend Developer Intern.

FOUNDER EXPERIENCE**Artemis io** Founder & Full-stack Engineer

Remote · 2025 - Present

Independent product studio — designing and shipping full-stack products end-to-end, beyond the frontend layer.

- Founded Artemis io to design, build, and ship independent SaaS products across product, frontend, backend, and infrastructure.
- Building HRMS, an enterprise human-resource management platform covering recruitment, onboarding, attendance, and payroll workflows.
- Building Jupiter Learning, a course-creation and online-school platform — course builder, payments, and student management — in the spirit of Exode.
- Own the full stack on both products: React / Next.js / TypeScript on the frontend, Python / FastAPI on the backend, with PostgreSQL and Redis.

● FEATURED PRODUCTS

shamCRM — Enterprise CRM Platform

FinGroup · 2024–2025

Enterprise-grade CRM for sales teams and internal workflows, comparable to Bitrix24 and amoCRM — now preparing for international launch.

- 1,000+ active users across companies including Eshkata Leasing, Nur Tech, Fayzi Rasul, Somon Sokhtmon, SoftTech Group, Archa, Artel, and Godzilla.
- Led a full platform redesign; shipped a Telegram mini-app and social integrations.
- Built leads, deal-pipeline, task, real-time chat, and dashboard modules with role-based access control and full product/inventory CRUD.
- Improved performance via lazy loading, code splitting, and caching; real-time features via event-driven architecture.

Vue 3 TypeScript Tailwind CSS REST API Laravel SQLite

Iki Food — Food Delivery Platform

Freelance / ITalent · 2023–2025

On-demand food and grocery delivery service for the Tajikistan market.

- Led a full redesign of the consumer app and rebuilt the admin panel from scratch.
- Built order, payment, delivery-tracking, live-chat, and restaurant storefront screens.
- Implemented real-time order tracking, notifications, and session management.

React React Native Flutter Nest.js PostgreSQL Firebase

UzbekFilm — National Streaming Platform

AttoLabs · 2025–Present

Content platform for the Uzbek film industry — streaming, catalog browsing, and media distribution.

- Resolved complex, cross-module frontend bugs and improved application stability.
- Maintained and documented a reusable, scalable UI component architecture.

Next.js TypeScript JavaScript Axios

Exode — Online-School & Course Platform

AttoLabs · 2025–Present

Course-creation and online-school platform for experts, creators, and companies across Central Asia — around 10,000 learners on the platform.

- Maintain and extend a production React SSR + GraphQL codebase serving real, paying customers.
- Use Observable and Redux State Sync to keep server-rendered and client state consistent across the app.
- Resolve bugs surfaced directly by user feedback, improving stability for course creators and students.
